

"Invu: Sage Line 50" provides seamless integration between Invu and Line 50!

This award winning accounts package now becomes complete with the addition of Invu's full industry strength document management software. You can rest assured that all your documentation is held under the full scrutiny of Invu with its critical version control and audit facilities. The integration allows you to scan, file and retrieve documents, straight from the Line 50 screen, using existing references relating to Customers/Suppliers, Sales/Purchase orders and Invoices/Products without the need for retyping!

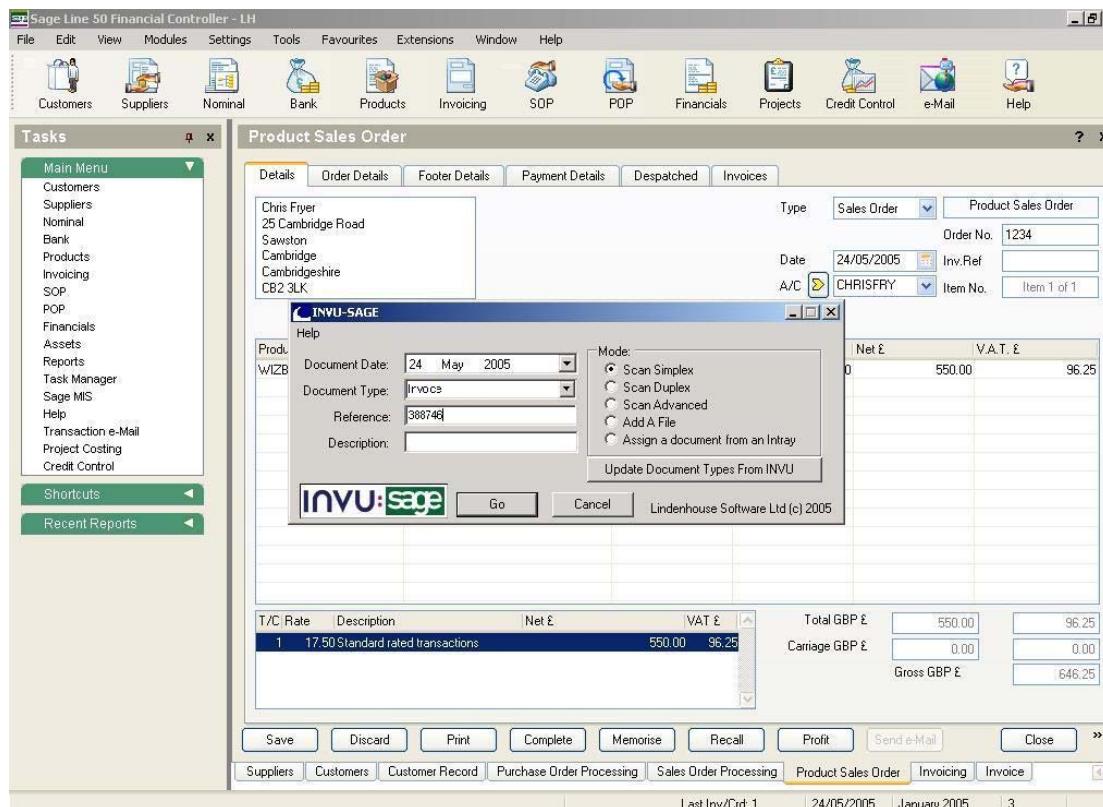

Product use could not be easier with the Invu icons appearing on the Line 50 screen.

The search icon allows anyone using Line 50 to quickly search for documents that are stored in Invu under any of the levels/references discussed. Similarly via the scan icon, you can simply scan/import documents using your existing Line 50 client information.

When indexing at the lower levels (e.g. SOP) documents are still provided at the higher level references meaning the document is not just filed under the SOP references but also under the customer reference simultaneously. This means when searching you can view individual sales or review the whole customer file!
